

Name

Data Engineer

Mobile: xxxxxxxxxxxx

Email: sample2@gmail.com

CAREER OBJECTIVE

To pursue a challenging career in an organization and become a contributing member to its success by leveraging my experience in **Azure Data Engineering, ETL/ELT pipeline development, cloud data platforms, and big data technologies**. Seeking an opportunity to utilize my expertise in **Azure Data Factory (ADF), Databricks, ADLS Gen2, Azure Synapse, SQL, and PySpark** to build scalable, efficient, and business-driven data solutions while continuously enhancing my technical and professional skills.

PROFESSIONAL SUMMARY

- Designed and developed **end-to-end batch data pipelines** using **Azure Data Factory (ADF), Azure Databricks (PySpark), ADLS Gen2, and Azure Synapse Analytics** for fintech and digital payment processing.
- Built scalable **ADF ingestion pipelines** to process high-volume **payment transaction data, settlement records, debit/credit transactions, and reconciliation datasets** from Oracle-based systems into **ADLS Gen2**.
- Implemented **Medallion Architecture (Bronze–Silver–Gold)** to transform raw banking and payment data into cleansed, standardized, and business-ready datasets for downstream analytics and reporting.
- Developed **PySpark transformation notebooks in Azure Databricks** to perform **data cleansing, deduplication, null handling, schema validation, and business rule transformations** on financial transaction data.

- Created and optimized **SQL queries, Stored procedures, functions, packages, and triggers** to support high-performance payment processing systems and database operations.
- Loaded **Gold-layer curated and aggregated datasets into Azure Synapse Analytics** for reporting, including **transaction summaries, settlement reports, account-level analytics, and payment trend analysis**.
- Configured **ADF Schedule and Tumbling Window triggers** for automated daily batch execution aligned with banking settlement and reconciliation cycles.
- Performed **data quality validation and RCA (Root Cause Analysis)** to resolve pipeline failures, schema drift, type mismatches, null key violations, and reconciliation issues between source Oracle systems and Azure layers.
- Implemented **Azure Key Vault integration** for secure credential and secret management across **ADF and Databricks** environments, following enterprise security standards.
- Collaborated with **QA, application, and production support teams** for deployment, release activities, and smooth transition of data engineering components into production.

CERTIFICATION

- **Microsoft Certified: Azure Administrator Associate (Certification Number: I389-1113)**
- **Microsoft Certified: DevOps Expert Engineer (Certification Number: I507-2334)**

SKILL SET

- **Cloud & Data Engineering:** Microsoft Azure, Azure Data Factory (ADF), Azure Databricks, ADLS Gen2, Azure Synapse Analytics, Azure Key Vault.
- **Programming & Processing:** Python, PySpark, SQL, Spark SQL, Data Transformation & ETL Development.
- **Data Architecture:** Medallion Architecture (Bronze, Silver, Gold), Delta Lake, Batch Data Pipelines, Data Warehousing.
- **Databases:** Azure SQL Database, Azure Synapse Analytics.
- **Data Integration & Quality:** ADF Pipelines, Schedule & Tumbling Window Triggers, Data Validation, Schema Evolution, Data Reconciliation, RCA.
- **DevOps & Collaboration:** Azure DevOps, Git, CI/CD, Release Management, Agile/Scrum, Production Support, Monitoring & Troubleshooting.

PROFESSIONAL EXPERIENCE

Project : #1

Title : Project-02 Banking Analytics Project

Responsibilities:

- Designed and developed an **end-to-end Banking Analytics Data Engineering pipeline** using **Azure Data Factory (ADF), Azure Databricks (PySpark), ADLS Gen2, and Azure Synapse Analytics** for processing banking datasets.
- Implemented **Medallion Architecture (Bronze–Silver–Gold)** in ADLS Gen2 to process and transform banking data from raw ingestion to business-ready analytics.
- Built scalable ingestion pipelines to process **10 banking datasets**, including customers, accounts, transactions, loans, credit cards, fraud transactions, and customer support tickets.

- Developed **PySpark transformation notebooks in Azure Databricks** for data cleansing, deduplication, null handling, schema validation, standardization, and derived column creation in the Silver layer.
- Implemented **Delta Lake and Unity Catalog external locations** to enable secure, governed, and scalable data storage and access across Bronze, Silver, and Gold layers.
- Created **Gold layer business aggregations** such as **Customer 360 View, Loan Portfolio Analysis, Branch Performance Metrics, Fraud Analytics, and Transaction Insights** for reporting and analytics.
- Integrated curated datasets with **Azure Synapse Analytics** to support SQL-based querying, reporting, and downstream analytical consumption for banking insights.
- Optimized data processing using **explicit schemas, Delta format, metadata-driven ingestion, and batch orchestration**, improving data quality and pipeline reliability.

CAREER PROFILE

Xyz Technologies Ltd – March'22 to

till date xyz Systems India Pvt Ltd –

Jan'20 to March'22

abc Technologies India Pvt Ltd – Dec'13 to Aug'19

EDUCATION SUMMARY

Bachelor of Technology in Information Technology (xyz Engineering College, location).
